

Intact Software has developed the 'Signature Capture Module'. The signature capture mechanism is a peripheral device that electronically captures an individual's signature for customer identification and transaction applications.

This facility automatically attaches electronic signatures to appropriate documents so you can view them from any terminal.

12.50%	0.00	0.00	Total EUR 76.82	
0.00%	0.00	0.00		
Others	0.00	0.00		

The signature capture facility will save time and improve collection by eliminating the task of filing signed dockets. It will also improve efficiency as you will no longer waste time searching for misfiled receipts. Furthermore, it will eliminate proof of delivery phone calls, by programming signatures to automatically print directly to customers invoices.

"Electronic signatures can now be attached to documents through the point of sale feature"
