

In any retail, wholesale, manufacturing or distribution business, the control and movement of the stock is of immense importance.

Whether a component is of minute value and is only part of a 'Bill of Material' or it is a finished good worth €10,000, the Intact database treats them with equal value. The stock movement history, the landed cost, the stock take facility have all been modified over the years resulting in one of the most comprehensive stock control packages available on the market.

The following outlines some of the key features of the Intact stock control and product database.

Key Features

- The 'Stock File' can comprise of 10 - 100,000+ stock items without any impact on performance.
- Products can be divided into groups which can be further sub divided into categories. There are also additional 'Status' and 'Department' fields for extra parsing.
- Each stock item can be allocated a 'Bin Number' and 'Pick Lists' can be printed in 'Bin Location' order.
- There are 'Minimum', 'Maximum' and 'Re Order Levels' per stock item.
- Each product description can be up to 4 lines with the option to print the first or all lines on invoices etc
- There are multiple cost prices associated with each product - last, average, landed, standard

- There are nine different selling prices on the stock file with the option to have a specific selling price to each and every customer.
- Selling prices can be calculated by 'List Price - Discount', 'Trade Cost & Markup', 'Quantity Breaks' or 'Fixed Prices'.
- 'Landed Costs' can be calculated buy using a combination of 'Duty' and 'Freight Rates' or 'Amounts'.
- Intact allows specific customer and supplier descriptions and codes. These can then be displayed on 'Purchase Orders' and 'Sales Orders' or 'Invoices'.
- 'INTRASTAT' and 'VIES' reports can be filed from the system with details stored in each stock file.
- Options to handle the product in a special manner - i.e. identify the product as 1. Timber, 2. Tile, 3. Stocked by Size.
