

# TECHNOLOGY Overview

## Intact Technology Overview

### Architecture

- Client Server Mode using Sequiter Codebase
- Shared data access

### Platforms Supported

- Microsoft Windows 2000
- Microsoft Windows XP Professional
- Microsoft Windows VISTA
- Mobile Solutions on Windows CE Mobile / .net

### Third Party Development

A comprehensive SDK ( Software Development Kit )is available for third party/VAR development (we currently interface to 12 other products from EPOS, Plant Hire, Auto retail etc.. ). Also provided is an XML web service for ebusiness web designers to interact with the INTACT database objects.

### Intact The Next Generation

Intact is 3 years now into the development of our next generation product based on Microsoft's new .NET Framework on which Vista and all future MS operating systems will be based. The new application is built on set of separate frameworks designed to give the ultimate in flexibility, customisation and scalability.

The new product will support high end database engines like Oracle and MS SQL Server along with Codebase, MSDE and Firebird. It is built using pure object oriented design from the ground up and will provide a feature set commonly only seen in very high end applications like SAP/Great Plains etc..

**Choosing a new system is a key decision for any business entity.  
When you choose Intact you are buying into a product that eagerly embraces  
the latest technologies.**
